About the Fund

The Pendal Enhanced Credit Fund (**Fund**) is an actively managed portfolio of primarily Australian corporate bonds.

Investment Return Objective

The Fund aims to provide a return (before fees, costs and taxes) that exceeds the Bloomberg AusBond Non Govt 0+ Yr Index over the medium term.

The suggested investment timeframe is three years or more.

Investment Strategy

The Fund is actively managed and aims to take advantage of investment opportunities within the Australian non-Government fixed interest market. The Fund invests predominantly in AUD non-Government fixed interest securities, including securities of investment grade issued by leading corporations listed on the Australian Stock Exchange. The Fund may also invest in a limited amount of investment grade hybrid securities, non-investment grade securities, unrated securities and, where appropriate, derivatives.

Investment Process

Pendal's Income & Fixed Interest team uses a disciplined and transparent process. The team's research effort focuses on identifying and capturing what we consider mispricings in credit market securities and utilises both qualitative assessment of companies and quantitative modelling which aim to identify opportunities and avoid problematic issuers. In addition to Pendal's internal research resources, Pendal sources research from an independent research company, CreditSights, focused on global companies.

Currency Management

The Fund may have assets denominated in foreign currencies. This means that changes in the value of the Australian dollar relative to foreign currencies may affect the value of the assets of the Fund. Currency markets can be extremely volatile and are subject to a range of unpredictable forces.

The Fund's foreign currency exposure may be hedged from time to time, in whole or part.

Portfolio Statistics (as at 31 October 2023)

Yield to Maturity [#]	5.78%
Running Yield [*]	4.52%
Modified duration	2.99 years
Credit spread duration	3.12 years
Weighted Average Maturity	3.49 years

[#] The portfolio yield to maturity is an estimate of the fund's internal rate of return. It is calculated as the yield to maturity of all securities comprised in the benchmark at the relevant time (sourced from Bloomberg), plus our estimate of the weighted average traded margin over the swap rate for each of those securities based on observed market prices. The portfolio yield to maturity does not represent the actual return of the fund over any period.

^{*} The portfolio running yield is calculated as the weighted average coupon rate of the physical portfolio assuming all securities are held at par or face value. Carry/interest income from synthetic positions are excluded from this calculation. Running yield does not reflect the actual income return of the portfolio.

Risks

An investment in the Fund involves risk, including:

- **Market risk** - The risk associated with factors that can influence the direction and volatility of an overall market, as opposed to security-specific risks. These factors can affect one country or a number of countries.
- **Security specific risk** - The risk associated with an individual asset.
- **Interest rate risk** - The risk associated with adverse changes in asset prices as a result of interest rate movements.
- **Credit risk** - The risk of an issuing entity defaulting on its obligation to pay interest/principal when due.
- **Liquidity risk** - The risk that an asset may not be converted to cash in a timely manner.
- **Valuation risk** - The risk that the value of an investment in a less active or liquid market is lower than what is reflected in the Fund's unit price.
- **Derivative risk** - The risk arising from use of derivatives to manage exposures to investment markets.
- **Counterparty risk** - The risk of another party to a transaction failing to meet its obligations.

Please read the Fund's Product Disclosure Statement (PDS) for a detailed explanation of each of these risks.

Market review

In October, credit spreads widened as investor sentiment weakened. The primary catalyst for this downturn in risk appetite can be attributed to the continued rise in global bond yields, and the events in the middle east with the conflict between Israel and Hamas driving wider geopolitical fears. On the flip side, dovish Central Bank rhetoric and a positive US earnings season supported markets.

The surprise Hamas attack on Israel drove market weakness. The prevailing concern lies in the potential for regional escalation from Iran or other influential actors such as Saudi Arabia and Qatar. A wider military conflict in the Middle East could lead to a reduction in oil supply, provoking a surge in crude oil prices.

Compounding this negative sentiment was the persistent increase in U.S. interest rates. The driver of rising yields has been the resilience of the U.S. economy, higher oil prices and the anticipation of substantial Treasury supply to fund the significant US fiscal spending. Key US economic indicators such as payrolls, producer price and GDP all exceeded expectations during the month.

Federal Reserve and ECB officials spoke about monetary policy being restrictive enough to lower inflation to their goals, and risks are now more evenly balanced relative to the past. This was viewed favourably by markets as it indicates that central banks may be close to the end of their hiking cycle.

A decent US Q3 earnings reporting season was also supportive. With just over half of the S&P 500 having reported by the end of October, 79% had beaten earnings expectations by an average of 8%. Actual sales growth was 2% with profit growth of 3% compared to the previous corresponding period.

Credit spreads were wider over the month. The Australian iTraxx index (series 40) traded in a 12bp range finishing 9bps wider to close at 97bps. Australian physical credit spreads moved out 2bp on average. The best performing sectors were infrastructure and resources that both tightened 3bps, whilst the worst performing sectors were supra-nationals and domestic banks that widened 4 & 2bps respectively. Semi-government bonds underperformed, moving out 9bps to commonwealth government bonds.

Fund performance and activity

The Fund outperformed the Bloomberg AusBond Non-Government Bond Index over the month.

Industrial, infrastructure and supra-nationals sector positioning added to performance.

Market outlook

We remain tactically positive on credit spreads given the continued fall in US core inflation and the resilience of the consumer. This easing of inflation concerns should see central banks ultimately reduce cash rates which should see soft economic landing as opposed to a harder landing, and in turn would be positive for risk assets.

We are still cautious medium term as tight labour markets globally could see services inflation remain sticky and would see Central Banks maintain cash rates higher for longer, which would translate into a deeper global economic growth slowdown and potential recession.

Tightening of credit lending globally is also a risk to growth.

Higher oil prices and geopolitical concerns remain a risk for inflation.
